Response to Arguments

1. Applicant's arguments filed on February 22, 2006 have been fully considered but they are not persuasive.

2. In response to applicant's arguments set forth in pages 1-3 of applicant's response with regard to the rejections of claim 1 and 3 under 35 USC 102(b) based on the patent to Nakazawa et al [USPN 5,319,719. (Nakazawa)], the examiner respectively disagrees.

-Applicant traverses the rejection based on the ground that (1) "Nakazawa's dynamic range compression does not necessarily compress the high density of the image (i.e., the density range of the lung field is uneffected)." (see 2nd paragraph of page 2 of applicant's response); and (2) "Examiner's contention that compressing the total dynamic density range "will read also on high density" (Office Action at page 3) is unsupported." (see 3rd paragraph of page 2 of applicant's response). It is also noted that other applicant's arguments with regard to the rejection of claims 2 and 4-9 under 35 USC 103 (see page 3 of applicant's response) have relied on applicant's arguments applied to claims 1 and 3.

With regard to (1), it is noted that the "density range of the lung field" is not recited in the rejected claims 1 and 3. Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See *In re Van Geuns*, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993). In this case, claim 1 for example recites "carrying out dynamic range compression on the image data so as to compress high density range of the chest tomographic image". With regard to (2), Nakazawa's dynamic range does comprise high density range according to column 3 lines 1-16 and figure 18.

-It is also noted that claimed "high density range" is not defined in the claim. Applicant is reminded that the examiner is entitled to give the broadest reasonable interpretation to the language of the claims. The examiner is not limited to applicant's definition which is not specifically set forth in the claims. In re Tanaka et al., 193 USPQ, (CCPA) 1977. So any density range larger than zero in Nakazawa's chest image could be qualified as claimed "high density range of chest tomographic image."

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Duy M. Dang whose telephone number is 571-272-7389. The examiner can normally be reached on Monday to Friday from 6:00AM to 2:30PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Matthew C. Bella can be reached on 571-272-7778. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
